## ~~20 Years Of Subsea Boosting Technology Development~~

Multiphase subsea boosting technology has been around for some 20+ years and has proven itself on a number of projects, including in deepwater. It offers the capability to help increase production, reduce topsides facilities and enable late-life production and low pressure or deepwater field production.

The industry-accepted solution is subsea boosting. The capabilities of subsea boosting systems have increased during recent years. Larger throughput and differential pressure capabilities and wider tolerance for production anomalies have lowered both capex and risk associated with subsea boosting systems.

Subsea boosting has reached a significant milestone regarding high-viscosity capabilities. In March 2017, Total E&P installed and put into operation a newly qualified high-viscosity, high-boost pump in the Moho Field offshore the Republic of the Congo. The pump had been through an extensive qualification program comprising flowloop testing on ...

Subsea boosting increases the flowrate of the oil or gas to the surface by reducing the back pressure on the well, and therefore increases the recovery factor of the reservoir. For oil, pumping can be used, while natural gases are boosted by compression.
