To get started. This is a simple command for scanning your local network (class C or /24): `nmap -sV -p 1-65535 192.168.1.1/24`. This command will scan all of your local IP range (assuming your in the 192.168.1.0-254

# Download Free Nmap Reference Guide

range), and will perform service identification -sV and will scan all ports -p 1-65535.

Nmap Tutorial: from the Basics to Advanced Tips

On average Nmap sends 5-10 fewer packets per host, depending on network conditions.

# Download Free Nmap Reference Guide

If a single subnet is being scanned (i.e. 192.168.0.0/24) Nmap may only have to send two packets to most hosts. `-n` (no DNS resolution) Tells Nmap to never do reverse DNS resolution on the active IP addresses it finds. Since DNS can be slow even with Nmap 's built-in parallel stub resolver, this option can slash scanning times.
