This thought-provoking book draws on the worldwide collections of the British Museum for its inspiration. Published to coincide with the 250th anniversary of the founding of that institution, its theme is appropriate to the event. The book addresses the questions of how and why we remember, drawing its evidence from across world cultures, and from antiquity through to contemporary times.

Read Online The Museum Of The Mind Art And Memory In World Cultures

John Locke described the mind as a cabinet; Robert Hooke called it a repository; Joseph Addison imagined a drawer of medals. Each of these philosophers was an avid collector and curator of books, coins, and cultural artifacts. It is therefore no coincidence that when they wrote about the mental work of reason and imagination, they modeled their powers of intellect in terms of collecting, cataloging, and classification. *The Mind Is a Collection* approaches seventeenth- and eighteenth-century metaphors of the mind from a material point of view. Each of the book's six chapters is organized as a series of linked exhibits that speak to a single aspect of Enlightenment philosophies of mind. From his first chapter, on metaphor, to the last one, on dispossession, Sean Silver looks at ways that abstract theories referred to cognitive ecologies—systems crafted to enable certain kinds of thinking, such as libraries, workshops, notebooks, collections, and gardens. In doing so, he demonstrates the crossings-over of material into ideal, ideal into material, and the ways in which an idea might repeatedly turn up in an object, or a range of objects might repeatedly stand for an idea. A brief conclusion examines the afterlife of the metaphor of mind as collection, as it turns up in present-day cognitive studies. Modern cognitive theory has been applied to the microcomputer, and while the object is new, the habit is as old as the Enlightenment. By examining lived environments and embodied habits from 1660 to 1800, Silver demonstrates that the philosophical dualism that separated mind from body and idea from thing was inextricably established through active engagement with crafted ecologies.

A definitive history of mescaline that explores its mind-altering effects across cultures, from ancient America to Western modernity Mescaline became a popular sensation in the mid-twentieth century through Aldous Huxley's *The Doors of Perception*, after which the word "psychedelic" was coined to describe it. Its story, however, extends deep into prehistory: the earliest Andean cultures depicted mescaline-containing cacti in their temples. Mescaline was isolated in 1897 from the peyote cactus, first encountered by Europeans during the Spanish conquest of Mexico. During the twentieth century it was used by psychologists investigating the secrets of consciousness, spiritual seekers from Aleister Crowley to the president of the Church of Jesus Christ of Latter-day Saints, artists exploring the creative process, and psychiatrists looking to cure schizophrenia. Meanwhile peyote played a vital role in preserving and shaping Native American identity. Drawing on botany, pharmacology, ethnography, and the mind sciences and examining the mescaline experiences of figures from William James to Walter Benjamin to Hunter S. Thompson, this is an enthralling narrative of mescaline's many lives.

In *Mounting Frustration* Susan E. Cahan uncovers the moment when the civil rights movement reached New York City's elite art galleries. Focusing on three controversial exhibitions that integrated African American culture and art, Cahan shows how the art world's racial politics is far more complicated than overcoming past exclusions.

Descartes boldly claimed: "I think, therefore I am." But one might well ask: Why do we think? How? When and why did our human ancestors develop language and culture? In other words, what makes the human mind human? *Evolution of Mind, Brain, and Culture* offers a comprehensive and scientific investigation of these perennial questions. Fourteen essays bring together the work of archaeologists, cultural and physical anthropologists, psychologists, philosophers, geneticists, a neuroscientist, and an environmental scientist to explore the evolution of the human mind, the brain, and the human capacity for culture. The volume represents and critically engages major theoretical approaches, including Donald's stage theory, Mithen's cathedral model, Tomasello's joint intentionality, and Boyd and Richerson's modeling of the evolution of culture in relation to climate change. No recent publication combines this breadth of evidential and theoretical perspective. The essays range in topic from the macroscopic (the evolution of social cooperation) to the microscopic (examining genetic data to infer evolutions in brain structure and function), and from the ancient (paleoanthropological reconstructions of hominin cognitive abilities) to the modern (including modern hominin's similarities to our primate cousins). Considered together, these essays constitute a fascinating, detailed look at what makes us human. PMIRC, volume 5

A comprehensive and wide ranging look at the current state and future prospects of education within the museum at the beginning of the 21st century. Contributors are past winners of the annual Award for Excellence and the John Cotton Dana Award presented by the Education Committee of AAM. Authors include Diane Frankel, Michael Spock, Mary Ellen Munley, Elaine Gurian, Bonnie Pitman, and Alberta Sebolt George, among other leading educators and museum professionals.
