Wind Station Model Lab Answer Key

Eventually, you will definitely discover a additional experience and success by spending more cash. yet when? accomplish you believe that you require to get those every needs taking into consideration

having significantly cash? Why don't you try to get something basic in the beginning? That's something that will guide you to comprehend even more a propos the globe, experience, some places, taking into consideration history, amusement, and a lot more?

It is your entirely own time to decree reviewing habit. accompanied by guides you could enjoy now is wind station model lab answer key below.

Place a “ 9 ”, then a “ 10 ”, in front of the coded number ex. 9 1 4.6 or 1 0 1 4.6 c. Determine which of the 2 decoded pressures falls within the normal range of pressures at the earth ’ s surface (960 - 1040 mb). Since 914.6 is below the normal range, 1 46 i s the code for atmospheric pressure of

1014.6 mb.

The wind speed is determined by adding up the total of flags,

lines, and half-lines, each of which have the following individual values: Flag: 50 kts Line: 10 kts Half-Line: 5 kts If there is only a circle depicted over the station with no wind symbol present, the wind is calm. Below are some sample wind symbols:

~~ES-Aug 2014 Q31-40 | Earth Sciences Quiz - Quizizz~~

If the number falls between 56.0 and 99.9, place a 9 before the first digit. If the number falls between 00.0 and 55.9, place a 10 in front of the first digit. Thus 24.7 would be 1024.7 mb. Directly above the

center circle on the sample station model are two symbols.

~~Station Models and Reading a Weather Map~~

The station model uses a wind barb to show both wind direction and speed. The wind barb shows the speed using "flags" on the end. Each half of a flag depicts 5

kn (9.3 km/h; 5.8 mph) Each full flag depicts 10 kn (19 km/h; 12 mph) Each pennant (filled triangle) depicts 50 kn (93 km/h; 58 mph) Winds are depicted as blowing from the direction the flags are facing.

~~Station model - Wikipedia~~

The stick of the station

models points in the direction of where the wind comes from. The flags on the stick approximate the speed of the wind, a short flag: 5 knots, a long flag 10 knots and triangle is 50 knots. A knot equals 1.85km/hr or 1.2 mph Cloud cover is determined by how much of the visible sky is filled with clouds.
